EDUCATION

APJ Abdul Kalam Technological University,
B.Tech in Computer Science Engineering

2020 – 2024

EXPERIENCE

MTM College of Arts & Science, IT Administrator

2025 – Present | Malappuram, Kerala

- Provided application and system support for **500+ students and 30+ faculty**, ensuring smooth academic and administrative operations
- Maintained and optimized the college website, achieving **99% uptime** and improving response time by **25%**
- Installed, configured, and maintained **servers, operating systems, and applications**
- Managed **user accounts, permissions, and access controls**
- Performed regular **system updates, patches, and backups**
- Maintained network infrastructure including **LAN/WAN, internet connectivity, routers, switches, and firewalls**
- Ensured **data security, antivirus protection, and system integrity**
- Monitored system logs and responded to **security incidents**
- Troubleshoot **hardware, software, and network issues**
- Provided technical support to staff and end-users
- Assisted in **database operations and SQL reporting**, generating monthly academic performance reports
- Conducted user training sessions, reducing repeated issues by **30%**
- Implemented preventive maintenance strategies, reducing recurring IT incidents by **35%**
- Documented system configurations, processes, and procedures
- Planned and supported **system upgrades and improvements**

SKILLS

Technical skills — Python | Django Framework | Application Support & Troubleshooting | Python | Django Framework | SQL (MySQL, PostgreSQL) | HTML, CSS, Bootstrap | Windows OS Administration | Website Maintenance & Hosting | Hardware & Network Troubleshooting | CCTV Installation & Support | User Support & Incident Resolution, **Tools** — VS Code | Git & GitHub | XAMPP | Antigravity, **Soft Skills** — Handling daily IT support requests and incident tracking | Maintained system patching cycles, backup processes, and access provisioning. | Assisting with SQL-based reporting | Maintaining production websites and internal applications

PROJECTS

Royal College of Engineering - College Management System

- Designed and developed a full-stack academic platform serving 300+ student records using Python, Django, Bootstrap, and PostgreSQL.
- Automated attendance and record workflows, reducing manual administrative workload by 60%.
- Optimized database queries and frontend assets, improving system performance and reducing page load time by 30%.
- Implemented secure role-based authentication with admin, faculty, and student access levels.
- Structured database schema to handle multi-user concurrency and data integrity.

IdentifEye - AI-Powered Face Recognition Attendance System

- Built a real-time attendance system using Python, OpenCV, Dlib, MySQL, and Tkinter.
- Achieved 95% facial recognition accuracy through image preprocessing and model optimization.
- Reduced manual attendance tracking time by 70%.
- Improved detection speed by 40% using optimized deep learning-based recognition techniques.

Thinkvo Solutions - Company Website

- Developed a responsive corporate website using React with 4 main pages (Home, About, Services, Contact).
- Built 6 reusable UI components to maintain consistent layout and structure.
- Implemented mobile-friendly design supporting desktop and mobile screen sizes.
- Delivered 8 business content sections aligned with client branding requirements.

Bridgeway Motors - Car Dealership Website

- Developed a Django-based dealership platform with 5+ core pages using PostgreSQL.
- Built interactive vehicle listings with search and filter options for multiple car records.
- Implemented 2 user roles (customer/admin) with secure authentication and inventory access.
- Integrated online booking for test drives and maintenance requests.

Tour Package Booking Platform

- Developed a Django-based travel booking platform with 4+ core pages for browsing and reserving tour packages.
- Implemented budget and activity-based filters to help users narrow package options.
- Integrated FAQ and blog modules for content management and customer information.
- Built database models to manage multiple tour packages and user inquiries.
